Who are we ?

At **Premium Plus**, manufacturing dental products is what we do. Only for the past decade we've not just made dental products... we've made better dental products.

Through innovation, research, investment in manufacturing, technical know-how and over 40 years experience in the dental trade, we've learned how to control and improve every step of the manufacturing process... and that's a huge advantage to our customers.

With a global view of the dental industry and knowledge of the different geographical markets, we have learned to understand what you expect and are committed to far exceeding your requirements. Our customers also benefit from our centrally located warehouse in Europe.

Why choose us ?

Whether its under our own **Premium Plus** brand, private labels or OEM projects, our emphasis is on quality for not only the products, but also its presentation. We not only manufacture in-house – We innovate and develop products, research raw material selection, manufacture moulds, construct production lines, create and design artwork and packaging for our partners, warehouse goods and turn our customers' ideas and requests into reality... providing the complete package.

Our continual investment in purpose-built machinery, technical training and market research along with our flexible approach keeps us at the forefront of dental manufacturers.

What do we make?

Over the past decade our range has increased to cover small equipment and the majority of plastic and paper disposable dental products. This gives us, and more importantly you, the ability to offer a huge range that includes LED curing lights, apex locators, handpieces, disposable prophylaxis cups and angles, micro applicators, syringe tips, barrier sleeves, saliva ejectors and suction tubes etc.

Where are we?

Premium Plus now supplies to over 90 countries and regions throughout the world and has distribution partners in the USA, Japan, Poland and the United Kingdom. The manufacturing site in China is constantly working on not only maintaining but exceeding standards set by ISO, CE and FDA. We are proud of the fact that we hold **ISO13485: 2016** certification for the **Quality Management System of Medical Devices** and have all of the class IIa products manufactured by us certified with the **CE₀₁₂₃** mark by **TUV SUD**. We know that with our experience, our integrated range of production processes and our ever-expanding range we have the ability to cover all our customers' requirements.

A08 DENTAL APEX LOCATOR

8 colours available:

- Bright LCD screen with the trajectory of the file being clearly indicated by different colours
- Foldable design with adjustable view angle, saves space and protects the screen
- The unit is designed with a smooth seamless body and membrane buttons to enhance cold sterilization and help avoid cross contamination
- Advanced multiple frequency technology with automatic calibrating ensures accurate measurement
- Measurement results are not affected by tooth type, size of root canal or the internal environment of root canal
- Different beep tones indicate the position of the file in the root canal
- Screen size: 110 mm x 70 mm Overall size: L122 mm x W118 mm x H25 mm
- Accessories autoclavable up to 134°C
- Weight: 300 gms (including rechargeable lithium battery)

REMARKS: Above data is based on test results using an A2 shade composite. The light tip was placed above and pointed perpendicular to the composite. Tests were done as per ISO 4049 Standard. The samples were measured and the data was divided by two (50% of the total composite depth cured). ISO 4049 Standard requires that the results for class II restorative materials should be at least 1.5 mm for non-opaque shades and 1.0 mm for opaque shades. All resins and composites have different curing times. It is recommended that you should test your resins and composites performance to determine the curing times required.

All resins and composites have different curing times. It is strongly recommended that you should test your composite and resin performance to determine the curing times required.

Data is only for reference, always follow the instructions from your resin and composite manufacturers.

- There are many variables (distance and angle between the light tip and composite, area, shade, thickness and type etc.) affecting composite curing times. It is recommended to place and cure a maximum of 2 mm for each composite placement.
- Using a barrier sleeve on the curing light will reduce 5-10% of light intensity.
- The light guide tip should be placed approximately 1-2 mm above the composite or resin and pointed perpendicular to the tooth surface.
- High intensity curing lights produce more heat. This is a direct indication of the power of the light being emitted. When using the device for more than 10 seconds, do not keep the light tip in one position. It is always recommended to use a dental syringe to blow a cold air flow on the area during long periods of curing. This will maintain a lower temperature for the composite and surrounding area, particularly when using rubber dam so as to avoid any rubber dam breakage due to heat built-up.
- Do not expose soft tissue to the light being emitted for more than 2 seconds or burns may occur.
- Avoid the light guide tip coming into contact with any soft tissue in the mouth.

Prophy Angles

DISPOSABLE 60° TURN RECIPROCATING LATEX FREE PROPHY ANGLES

NO SPLATTER - The centrifugal force generated by a normal 360° turn prophy angle results in splattering and mess. Our **NEW 60° turn reciprocating** prophy angles eliminates potential splattering of prophy paste, blood and saliva, keeping the prophy paste in the cup where it belongs.

NO HEAT - Our **NEW 60° turn reciprocating** prophy angles build up much less heat during use, assuring a smooth, cool treatment for your patient.

EFFECTIVE - Due to less heat generated during use, if necessary more pressure may be applied to remove stubborn stains.

FASTER - Thanks to our innovatively designed **NEW 60° turn reciprocating** prophy angles, the prophy cup or brush can be used continuously on the tooth surface, saving valuable chair time.

SAFER - The rotational motion of traditional prophy cups and brushes can cause laceration and bleeding of the gums. Our **NEW 60° turn reciprocating** prophy angles provide a much safer and pain-free prophylaxis treatment.

WARNING: USE OF THESE 60° TURN RECIPROCATING PROPHY ANGLES IS EXTREMELY ADDICTIVE
Once you've tried them, you will never want to use any other prophy angles again

Greenline air-water syringe tips

Reusable products are a great idea. Unfortunately, trying to clean the inside of a reusable metal air-water syringe tip is just not possible and if you can't clean it, you can't guarantee the effectiveness of its sterilisation. This means that using a disposable plastic air-water syringe tip is the only way to guarantee avoiding cross contamination.

- Directly interchangeable with American type syringe tips (long), or European syringes which have been converted to use American type syringe tips (short)
- Made from 100% recycled plastic
- No sharp edges for patient comfort
- Unique quad air core design to ensure dry air
- Cardboard packaging which is easily recyclable

Greenline Air-water Syringe Tips
 G-018 (American Type) 200 pcs/box
 G-028 (European Type) 200 pcs/box

1 Our Greenline air-water syringe tips are made from 100% recycled plastic, using waste materials left over from our other manufacturing processes.

2 The Greenline air-water syringe tips are packaged in 100% recyclable cardboard boxes, instead of large plastic bags, helping to reduce the amount of plastic packaging in your surgery.

Greenline bamboo cups

- Leakproof construction, non-slip design
- Dispenses easily from cup dispenser due to their rolled lip
- Conveniently designed 170ml (6oz) size

Looking to cut down on plastic use? Switching to bamboo cups is a simple and easy change that can have a big impact on reducing plastic waste in your surgery. Here are some reasons to make the switch to using bamboo:

Bamboo Cups 170 ml (6 oz), 1000 pcs/box
 6800BB Blank
 6800BH Healthy Teeth (4 assorted designs)

1 Bamboo is the world's quickest growing plant and provides a sustainable source of material. When bamboo is cut down to make paper, it is able to quickly recover to be harvested again.

2 Bamboo absorbs a large amount of CO² as it grows, which helps to offset human carbon emissions.

3 Our Greenline outer carton is 100% recyclable.

HOLLOW HANDLE micro applicators

In an effort to limit the environmental effect of one of the most used items in a dental surgery we came up with some great ideas:

- Bends into any angle for the placement of small controlled amounts of material in limited access areas.
- Economical - saving up to 80% by the reduction of excess materials used.

Hollow Handle Micro Applicators
 (Length 100 mm, dia 3 mm handles)
 HH-901 Regular (dia. 2.5 mm) Light Green
 HH-902 Fine (dia. 2 mm) Medium Green
 HH-903 Ultra Fine (dia. 1.5 mm) Dark Green

1 45% less plastic used in each hollow handle applicator than our standard micro applicator, due to the hollow design of the handle.

2 Instead of using new plastic, we use 100% recycled plastic for the brush tip and 50% recycled plastic for the hollow handle. This recycled plastic is made using waste materials left over from our other manufacturing processes.

3 No more plastic tube that can use up to a third of the amount of plastic as the actual product - just a 100% recyclable box.

mini micro applicators

In an effort to limit the environmental effect of one of the most used items in a dental surgery we came up with some great ideas:

- Bends into any angle for the placement of small controlled amounts of material in limited access areas.
- Economical - saving up to 80% by the reduction of excess materials used.

Mini Micro Applicators
 (Length 85 mm, dia 2.5 mm handles)
 G-9901 Regular (dia. 2.5 mm) Light Green
 G-9902 Fine (dia. 2 mm) Medium Green
 G-9903 Ultra Fine (dia. 1.5 mm) Dark Green

1 We designed the handle to be a smaller, more practical size that reduces the amount of plastic used by 50% in comparison to our standard micro applicators.

2 Instead of new plastic, we used 100% recycled plastic. This recycled plastic is made using waste materials from our other manufacturing processes.

3 No more plastic tube that can use up to a third of the amount of plastic as the actual product - just a 100% recyclable box.

micro applicator tips

Our most environmentally friendly micro applicators:

- For the placement of small controlled amounts of material in limited access areas.
- Economical - saving up to 80% by the reduction of excess materials used.

Greenline Micro Applicator Tips
 G-921 Regular (dia. 2.5 mm) Light Green
 G-922 Fine (dia. 2 mm) Medium Green
Autoclavable Micro Applicator Tip Handle
 7502W White
 7502T Transparent

1 By using a micro applicator tip with a reusable handle, you can reduce the amount the plastic that you would normally use by 80% when compared to a standard micro applicator.

2 Using an autoclavable handle saves plastic. Clean it, autoclave it and re-use it. Simple and effective.

3 Our micro applicator tips are packaged in a 100% recyclable cardboard box. Recycling can prevent pollution by reducing the need to collect new raw materials.

4 Instead of using new plastic for the micro applicator tips, we use 100% recycled plastic. The recycled plastic is made using waste materials from our other manufacturing processes.

Welcome to our new Greenline. We believe that making simple changes to the everyday products you purchase is the easiest way to help our planet. This range is our first step towards offering you the choice of more environmentally friendly products.

After scratching our heads, we've created our interdental brushes with a few 'ez' changes:

ez interdental brushes

- ISO size (colour coded)
- Latex and BPA free
- Reusable
- Cardboard box
- Non-slip, easy grip design
- Small, compact and easy to carry

Interdental Brushes, ISO Size No. 1-6
Single or Assorted Sizes, 6 pcs/box

- 1 We have designed the shape of our handle to be small and practical in size, so that it uses up to 65% less plastic than other leading brands
- 2 Instead of using new plastic, we use 100% recycled plastic for the brush handle and 50% recycled plastic for the protective cap. This recycled plastic is made using waste materials left over from other manufacturing processes.
- 3 Unlike some other brands who package interdental brushes in unnecessarily large plastic boxes and bags, we use a cardboard box which is 100% plastic free and easily recyclable
