Dear customers and partners,

Teeth are essential for people's well-being – and replacing natural teeth is a major responsibility. For more than 30 years, this knowledge has motivated us to ensure patients are left feeling comfortable and secure with our implant dentistry solutions.

How we support you.

As a family-run company, we put customer proximity and personal cooperation in first place.

With us as a partner by your side, you have access to a comprehensive product range supplemented by the unique BEGO Security Plus warranty and our LiVE service program.

Be confident that you can rely on us – always.

BEGO Guide order portal

Your benefits at a glance:

- no own planning software required
- we create an individual planning proposal for you
- You simply send us your CT or CBCT data set (DICOM data) and a plaster model

Register at guide.bego.com

BEGO GUIDE

Your affordable entry into guided surgery

Regardless of the implant system used, the BEGO Guide planning center enables you to use 3D diagnostics and drilling guides. Without investment costs in planning software, you as a dentist, implantologist and dental technician can integrate the system into your daily practice or laboratory routine - with an excellent result for you and your patients.

How does it work? The BEGO Guide planning center offers you the possibility of obtaining a surgical guide quickly and inexpensively without your own implant planning software. You send the CT or CBCT data to our online planning center and we create an implant planning proposal for you within a very short time.

You will then receive a pilot or fully guided surgical guide from our digital production facility in Bremen.

Your benefits at a glance

- No investment in software
- Compatibility with all CT and CBCT devices
- Delivery of a completely finished surgical guide
- Compatible with BEGO Guide Trays for fully guided insertion of BEGO Semados® S/SC/SCX/RS/RSX^{pro} implants
- Pilot drill guides (sleeve diameter 2.0 mm) for all implant systems

Product overview

Description	REF
Planning proposal Includes preparation of a planning proposal after specifying your desired implant positions (regardless of the number of implants to be placed) and the desired implant system; provision of the planning in the BEGO Guide order portal, incl. online planning discussion, if necessary	57118 (BEGO)
	57119 (non-BEGO)
BEGO Guide (BEGO Semados®) Pilot or fully guided guide for BEGO Semados® implants incl. all sleeves, regardless of the number of implants	57126 (Pilot)
	57127 (fully guided)
BEGO Guide (Third-party implant) Pilot guide for third-party implants incl. all sleeves, regardless of the number of implants	57170
Guide design Includes the creation of a print file (including scanning and matching) either based on the planning from the planning center or by sending a 3Shape planning file (30XZ)	58214
Wax-Up Creation of a digital prosthetic preliminary set-up, price per tooth position	58989
Pick-up service Package pick-up (situation model and CD, if applicable) at the desired date, can be booked additionally in the BEGO Guide order portal	–
Shipping costs Delivery of the guide usually next working day ¹ , depending on the region Delivery of the guide usually next working day until 12:00 pm ¹ , depending on the region Delivery of the guide usually next working day until 10:30 am ¹ , depending on the region	–
Express processing For faster processing of cases that are released at short notice ²	99430

¹ After successful approval of the planning proposal and production of the guide (production time usually 2-3 working days)

² Express processing shortens the delivery time by one working day on average

If you have any questions, please contact the BEGO Guide Hotline at +49 421 2028-230.

PRICELESS.

The unique, all around, worry-free guarantee for
BEGO implant care

Reimburses dental fees, laboratory and material costs

Reimburses you for dental fees, laboratory and material costs

Minor costs

S implants TG with PS⁵ Design

The tissue-level system for soft tissue management and a higher interface.

Your benefits

- Implant interface at gingival height
- High machined implant shoulder
- One-stage implantation technique is possible
- For the most stringent quality requirements – 100 % German development and manufacturing
- Same implant-abutment interface as for BEGO Semados® SC/SCX/RS/RSX implant system
- Stable connection with no micro-movements during functional masticatory loading (up to 150N)
- Use in combination with BEGO Semados® S-Line Tray^{Plus}

Technical details

- Self-tapping implant with Platform Switch and 3 mm machined implant shoulder
- Diameter: 3.75 · 4.1 mm
- Lengths: 10 · 13 mm (osseous nominal size + gingival area)
- Gap-free fit of the abutments thanks to the internal tapers
- Manufactured from grade 4 pure titanium with ultrapure homogeneous TiPure^{Plus} surface

Implants

Description	REF	Color code	Size	Compatibility	Units
BEGO Semados® implants incl. cover screw and titanium insertion posts TiPure ^{Plus} surface Material: Titanium grade 4, cold formed (packaged sterile)	58330	■	3.75 L10	S-TG	1
	58331	■	3.75 L13	S-TG	1
	58333	■	4.1 L10	S-TG	1

BEGO Security Plus ⁴ Implant warranty	83538		1
---	-------	--	---

S implant TG L10, total length 12.5 mm

S implant TG L13, total length 15.5 mm

Note: TG = Transgingival. Preparation corresponding to the stated nominal lengths (L10 or L13). Compatible with existing Platform Switch prostheses (PS Line).

⁴ Please take into consideration the particular warranty conditions in the BEGO Security Plus product information, REF 84388. May not be available in all countries.

⁵ Platform Switch Design

SC / SCX implants with PS⁵ Design

The classic system with a proven cylindrical design.

Your benefits

- SC/SCX implants – preservation of the crestal bone thanks to the integrated Platform Switch
- Efficient – just one surgical tray needed
- Well thought out – cover screw included
- Freedom of choice based on preference and indication – machined implant shoulder (SC implants) or micro-structured (SCX implants)
- Optional – Navigated / template-guided preparation of the BEGO Semados® SC / SCX implants with diameters 3.25-4.5 using the BEGO Guide system
- To satisfy the most stringent quality requirements – 100 % German development and production

Technical details

- Platform Switch
- Gap-free fit of the abutments thanks to the internal taper
- Self-tapping thread
- Manufactured from grade 4 pure titanium with ultrapure homogeneous TiPure^{Plus} surface
- Diameter: 3.25 · 3.75 · 4.1 · 4.5 · 5.5 mm
- Lengths: 7 · 8.5 · 10 · 11.5 · 13 · 15 mm
- Diameter 5.5 in length 7 mm if there is not much vertical bone height available

BEGO Semados® SC/SCX implants

RS/RSX und RS/RSX^{Pro} implants with PS⁵ Design

The root-shaped implant for a wide range of situations.

Your benefits

- Low stresses in the implant – self-tapping bionic thread designed to withstand stresses
- Integrated platform switching – supports the preservation of crestal bone
- Fast – only a few rotations needed for insertion
- Simple to use – inserting using self-centering
- Well thought out – cover screw included
- Optional – navigated/template-guided preparation of the implants with diameters 3.0–4.5 using the BEGO Guide system
- For the most stringent quality requirements – 100 % German development and manufacturing

Technical details

- Conical implant shape with rounded apex
- Self-tapping thread design with optimal cutting angle
- Diameter: 3.0 · 3.75 · 4.1 · 4.5 · 5.5 mm
- Lengths: 7 · 8.5 · 10 · 11.5 · 13 · 15 mm
- Fabricated from grade 4 pure titanium with TiPure^{Plus} surface
- Gap-free fit of the abutments thanks to the internal taper
- RS/RSX 3.0 suitable for use with narrow anterior gaps to replace teeth 12, 22, 32–42
- Diameter 5.5 in length 7 mm, for cases without appropriate vertical bone height available

Note: BEGO Semados® SC/SCX implants 3.25-4.5, template-guided preparation using the BEGO Guide System is an option.

⁴ Please take into consideration the particular warranty conditions in the BEGO Security Plus product information, REF 84388. May not be available in all countries.

BEGO Semados® RS/RSX and RS/RSX^{Pro} implants

Note: BEGO Semados® RS/RSX and RS/RSX^{Pro} implants 3.0-4.5, template-guided preparation using the BEGO Guide System is an option.

⁴ Please take into consideration the particular warranty conditions in the BEGO Security Plus product information, REF 84388. May not be available in all countries.
⁵ Platform Switch Design

RI implants with PS⁵ Design

Your specialist for soft bone and narrow ridges.

Your benefits

- Microthread in the neck region – for improved force transfer to the crestal bone
- Increase in the primary stability due to the condensing thread design for lateral bone compression
- Well thought out – cover screw included
- Integrated Platform Switch supports the preservation of the crestal bones
- To satisfy the most stringent quality requirements – 100 % German development and production
- Stable connection with no micro-movements during functional masticatory loading (up to 150 N)

Technical details

- Self-condensing, conical implant with Platform Switch and 0.5 mm machined implant shoulder
- Diameter: 3.75 · 4.1 · 4.5 · 5.5 mm
- Lengths: 8.5 · 10 · 11.5 · 13 mm
- Manufactured from grade 4 pure titanium with ultrapure homogeneous TiPure^{plus} surface
- Gap-free fit of the abutments thanks to the internal taper
- Internal hex prevents rotation of abutments

Description	Units	
Bar attachments available for: - Preci-Vertex[®] 1.8 mm - Preci-Vertex[®] Crown - Preci-Vertex[®] Bar	1	
Gewindebohrungen für Retentionselemente, erhältlich für: - Zest Anchors[®], BEGO EasyCon - CEKA[®] attachment M2 - CEKA[®] attachment M3 - CEKA[®] ball anchor M2	1	
Drill elements 1.9 – 3.0 mm	per unit	
Bar element Preci-Horix [®] 1.8 mm	per unit	

Retention elements

Description	
Dolder[®] bar female parts palladium alloy Resilience bar attachments, female parts with retention for polymer	
available from Ceka-Vertrieb Deutschland, Akazienstraße 7A, 30169 Hannover, Tel. +49 511 8070041, www.ceka-vertrieb.de	

Note: Bridge constructions not available for BEGO Semados[®] RS/RSX implants Ø 3.0!

DISCOVER THE POSSIBILITIES

VarseoSmile® TriniQ® ONE FOR ALL

UNLEASH THE DIVERSITY OF DENTAL 3D PRINTING WITH VarseoSmile® TriniQ®

Innovation meets versatility! From permanent, aesthetically demanding three-unit bridges to wide-spanning provisionals, our resin offers the right answer for almost every challenge. Let the flexibility and outstanding quality of **VarseoSmile® TriniQ®** inspire you and expand your range of offerings. Discover how, with 135 years of experience in dental material research, we are shaping the future of dental technology and dentistry.

LEARN MORE ABOUT BEGO

BEGO combines tradition and innovation to offer you top-quality products and services in the field of dental technology. We provide high-quality precious metal solutions, state-of-the-art digital technologies and materials for precise and aesthetic dental restorations, as well as innovative and reliable implant systems for sustainable and secure dental care. For over 130 years, we have stood for quality you can rely on.

Multi ^{Plus} System - Multi^{Plus} titanium abutment - Multi^{Plus} Universal	20

General notes

To prevent damage to the components, original BEGO Implant Systems tools and products must be used for processing. The use of the torque ratchet in particular is required to comply with the prescribed initial tension of the connecting screws (specification stated in Ncm).

- Ensure that the prosthesis screws are not used in the laboratory and check that they have not been damaged.
- Once the implant abutments are finally screwed in, after about 5 to 10 minutes all connecting screws must be tightened/checked once more with the specified tightening torque.
- The implant/prosthesis interfaces must be regularly checked to ensure they are firmly seated and there are no gaps.
- If the components are exposed to extremely high loads, the screw(s) may loosen under some circumstances. The reasons for this must be identified and eliminated!
- It is recommended that implant abutments that are screwed in the implant with a separate prosthesis screw are screwed in with a new prosthesis screw if the screw is loosened, for example, for cleaning the prosthetic restoration/implant abutments.

All specifications are determined to the best of our knowledge based on many years of practical applications and apply for restorations that have been executed in accordance with both our expertise and general scientific knowledge.

Note: Manufacturer notes about trade names, see page 93

Material specifications

General information about titanium

Titanium is a biopassive or bioinert substance that has an exceptionally neutral taste and is radiotransparent and resistant to corrosion as well as being a poor conductor of heat (thermal conductivity 0.168 to gold 3.118).

In implant dentistry, pure titanium and titanium alloys are processed while pure titanium also contains foreign components. Pure titanium is classified into 4 grades based on the proportion of foreign substances.

In all 4 groups, a maximum of 0.05% N, 0.08% C, and 0.015% H may be present. These substances are unavoidable because they are produced during the extraction of titanium or are deliberately introduced to control the physical properties.

Pure titanium (grades 1–4) and titanium alloys (from grade 5 onward) can be used for all dental work. It is possible to veneer crowns and bridges made of titanium with special ceramics, which, because of a phase transformation of the titanium at 882°C (volume change), are fired at temperatures below 800°C and must have a specific WAK (titanium: WAK of approx. 9.6).

When processing and polishing, the poor thermal conductivity of titanium must be heeded. During processing, heat may accumulate in localized areas, leading to increased O₂ deposits and in turn to embrittlement of the material.

Because titanium smears during machining, special mills must be used. Freshly polished surfaces only retain their mirror finish if they do not come into contact with H₂O for at least 10 minutes.

During this time, they form a surface oxide that acts as a protective layer. When modelling frameworks, it must be noted that when casting titanium a thick, strong oxide layer develops with components of the investment material, which is known as the cast layer. This layer must be removed leaving no residue. Edges of models must be reinforced and are adjusted during the finishing. Titanium and titanium alloys can only be joined using welding (laser, plasma, arc, resistance).

Titanium

Elements	Grade 2	Grade 3	Grade 4	Grade 5
Nitrogen, max. [%]	0.03	0.05	0.05	0.05
Carbon, max. [%]	0.08	0.08	0.08	0.08
Hydrogen, max. [%]	0.015	0.015	0.015	0.015
Iron, max. [%]	0.3	0.3	0.5	0.4
Oxygen, max. [%]	0.25	0.35	0.4	0.2
Aluminium [%]				5.5-6.75
Vanadium [%]				3.5-4.5

Compositions

Material	Article
Pure titanium grade 4 As per ASTM F67	BEGO Semados® implants
	CADP Multi ^{Plus} (CAD positioner)
	Implant cover screws
	Female parts ² Dalbo®-PLUS, female parts
	PS CADP (CAD positioner)
	TiBA (bar abutment)
Titanium grade 5 (titanium alloy Ti-6Al-4V) As per ASTM F136	Impression post
	Healing abutment
	Selection set 0°/15°/20°
	BEGO Guide master sleeves/spoons
	BEGO Semados® insertion posts on implants
	CAD SP (scansupport)
	Drill stops
	Easy-Con impression coping – cap, analog, retention cap
	Model implants
	Multi ^{Plus} healing posts, impressions, implant analogs, titanium abutment, adhesive abutment
	OCP A (implant analogs)
	Prosthesis screws/technician screws
	PS BA (ball attachment abutment)
	PS BA (ball attachment abutment), spacer
	PS CAD/CAM (adhesive abutment)
	PS Easy-Con (abutment) (titanium-nitride coating)
	PS HP/PS HPW (healing abutment)
	PS ITA (temporary abutment)
	PS Multi ^{Plus} (post)
	PS OCP, OCP abutment (restoration set)

Compositions	
Material	Article
Titanium grade 5 (titanium alloy Ti-6Al-4V) As per ASTM F136	DIM-Analog® body
	IDC (implant adjustment instrument)
	PS PMB (milling blank, TI-Form milling blank)
	PS TiA (solid abutments)
	PS TiAA (solid abutments)
	PS TiB/PS TiB NH (adhesive abutment)
	PS TTiA/PS TTiA NH (temporary abutment)
	PS UNI/PS UNI NH (Universal abutment Hex/no Hex), Universal base Hex/no Hex
Stainless steel	BEGO Guide preparation instruments/instruments, initial drills, tissue punches, bone shapers, pilot drills, pilot markers, depth drills, countersinks, threadformers, thread taps, shape drills, trepan drills
	DIM-Analog® knurled screw
	Paralleling post
	Insert tool for implants
	Depth gauge
	Guiding wrench
	Drill extension
Polyetheretherketone (PEEK)	Healing abutment, individual Ø7
	PS OCP (restoration set), multifunctional cap
	PS PPA/PS TPA (temporary abutment)
60Au–19Pt–20Pd–1Ir	PS GCO/PS GCO NH (gold cast-on abutment Hex/no Hex), cast-on abutment Hex/no Hex
69Au–12Ag–11Cu–4Pd–3Pt	Female parts ²Dalbo®-PLUS, retention insert ²Dalbo®-PLUS
Polyoxymethylene (POM)	Female parts ²Dalbo®-PLUS, placeholder
	Multi ^{Plus} Universal, wax-up sleeve for gold cast-on
	PS CTI (impression set, closed tray), impression post cap
	PS GCO/PS GCO NH (gold cast-on abutment Hex/no Hex), wax-up sleeve for gold cast-on
	PS UNI/PS UNI NH (Universal abutment Hex/no Hex), wax-up sleeve Universal
Polycarbonate (PC)	LCC, LCB (laboratory caps)
Polyamide (PA)	Easy-Con impression coping, production insert
	Easy-Con retention insert

Note: Manufacturer notes about trade names, see page 93
